All Systems Go For SoHO Users During Power Loss!

The new Riello UPS Plug Dialog solves the most basic of problems for small office and home system users – how to easily protect local equipment from momentary power loss. Unlike most Uninterruptible Power Systems within the 350-550VA size band, Riello's Plug Dialog has four output sockets that can take either standard UK 3-square pin or European Schuko plugs. You can literally plug and go!

Plug Dialog is therefore ideal for protecting a wide range of small office and domestic appliances including personal computers, scanners, printers, modems, TVs, DVD readers, Playstations, Hi-fis, phones and fax machines. Not only will Plug Dialog provide up to 30 minutes runtime – enough time to easily download the latest tunes from the new iPod website - but when mains is present the UPS is conditioning the incoming mains to provide protection from locally generated high energy surges. The UPS will even boost low mains supply voltages to ensure that the protected loads work well within their optimum input voltage range.

For the real 'techno wizards' Plug Dialog can be interfaced into the local computing environment using the MicroSoft approved Riello UPS PowerShield² monitoring and control software. This is available for download by customers from the Riello UPS software website at www.ups-tech.net. Interfacing is done via the USB port on the Plug Dialog. The UPS also features communication line protection for a local telephone connection.

new product release

release date: immediate

Available in a matt black finish Plug Dialog requires minimal maintenance and has easy to source user-replaceable batteries, expected to last between 3 and 5 years. The UPS has a 2 year warranty and can be desk or wall mounted. Prices start at £89.00 ex VAT. Sales hotline 0800 269 394 or email sales@riello-ups.co.uk
