

Riello Galatrek Partners For Power Quality Initiative

Riello Galatrek Ltd. has become the latest company to join the Power Quality Partnership, the UK group which is part of the Leonardo Power Quality Initiative (LPQI), the European education and training programme for LV electrical installation professionals.

Riello Galatrek Ltd. joins other leading industrial companies including Fluke (UK), Rhopoint Systems and LEM Instruments, to support this programme which provides practical guidance on the identification, measurement and mitigation of power quality problems in LV installations. Riello Galatrek has joined as an affiliate partner and will be attending and supporting technical seminars held on these subjects in the UK.

Robin Koffler, General Manager for Riello Galatrek Ltd.;

“Riello Galatrek is a strong supporter of technical seminars as a way to enlighten and educate market segments about the importance of power quality and specialist technical aspects. We are very proud as the British subsidiary of Riello UPS Manufacturing srl to be associated with the Power Quality Partnership initiative in this area.”

The cornerstone of this initiative is the Power Quality Application Guide, The Guide is a consensus of views from experts across Europe and is written for those directly involved in the design, operation and maintenance of installations and covers introductory material, troubleshooting and mitigation.

The LPQI is running two FREE seminar series during 2004; 'Power Quality & Availability in Low Voltage Installations' (14th September in Edinburgh, 5th October in London and 12th October in Birmingham) and 'Introduction to Power Quality, Standards & Solutions'

Note to Editors:

LPQI was initiated with the support of the European Commission and is delivered throughout Europe by Power Quality Partnerships under the umbrella of a Steering Group and Editorial Board with representatives from leading European academic institutions, organisations and industrial companies including UMIST and the University of Bath. For details of programmes and venues and to register visit

<http://www.cda.org.uk/PQP/pgp.htm>

The **Power Quality Application Guide** has been adapted to form on-line e-learning modules, which can also be accessed from www.lpqi.org and is available in hard copy or downloadable from the web site. It provides the basis for a series of free technical seminars on a host of PQ issues including earthing, availability, measurement and solutions. More information at www.lpqi.org
